

LET'S TALK CABLE

British standards and best practice continuously improve, which means it is more important than ever to be kept up-to-date with the hot topics of the cable world.

Prysmian understands how important it is that practitioners fully comprehend the issues surrounding cables as ultimately cable and cable systems systems help keep people safe.

Prysmian has put together four seminars consisting of the most up to date research as it believes it to be vital that the sector is kept informed.

Our seminars can be tailored to suit your needs so BS 8519 Seminar, the Sub-Standard Cable Seminar, the BS 5266-1 Seminar and the BS5839-1 Seminar. Here we give you a brief outline of what each seminar entails:

- BS 8519 Seminar fully explains BS8519 to enable you to confidently choose the right cable for your fire fighting and life safety systems.
- Sub-Standard Cable Seminar outlines the risks of substandard cable that has entered the UK market. You will be provided with examples so you know how to detect them to keep yourself and others safe from risk.
- Emergency Lighting Seminar informs you on the need-to-know changes to cable selection and performance in BS 5266-1. Here you can find out exactly what this means and how this will affect your practice.
- Fire Alarm to BS 5839-1, this material helps you get to grips with the differences between the 'standard' and 'enhanced' fire resistant cable and equipping you with the knowledge of which cable to use and where. The Prysmian specification manager will also provide advice on cable fixing, segregation and protection.

Our seminars have proved very popular with those who design, specify and install because not only do they educate you on the issues that really matter, they also provide an excellent opportunity to speak to other professionals and share your experiences.
